Yaming Zhang

Redwood City, CA zhangyaming0726@gmail.com linkedin.com/in/yz726/ 857-437-2701

EDUCATION

Northeastern University, *Boston, MA*, **GPA: 4.0** *Dec 2023*
Master of Science in Electrical and Computer Engineering
Concentration: Computer Systems and Software

University of California Riverside, *Riverside, CA*, **GPA: 3.8** *Jun 2020*
Graduate Preparation Program in Computer Science(No Degree)

Xidian University, *Xi'an, China*, **GPA: 3.6** *Jun 2019*
Bachelor of Science in Computer Science

SKILLS

Languages: Java, Golang, Node.js, Scala
Frameworks/Libraries: Spring, gRPC, Spark, Kafka, Flink
Databases: MySql, Redis, MongoDB, Elasticsearch, ScyllaDB
DevOps: Kubernetes, Filebeat, Prometheus, Grafana

WORK EXPERIENCE

Electronic Arts (EA), *Redwood City, CA*
Software Engineer Intern *May 2023 – Present*

- Designed and implemented the Player Lifecycle Graph, a serialization model to manage players' states and unified messages in popular games such as FIFA and APEX.
- Developed an Apache Flink topology for Apache Kafka streaming trigger events execution, enabling efficient retrieval of lifecycles from Amazon S3, reading player profiles from ScyllaDB, and executing the corresponding lifecycles.
- Utilized EADP's Data Query Language (DQL) to extract data from unstructured JSON events, evaluate boolean conditions, and execute action scripts.
- Built an UI with ReactFlow and implemented APIs with SpringBoot, empowering campaign managers to draw lifecycle flowcharts and retrieve players' current states in games.

Tencent, *Beijing, China*
Software Engineer *Jun 2020 – Aug 2022*

- Developed multiple back-end servers using gRPC or tRPC with high-tolerance APIs, shipper for logs, monitoring system, asynchronous channels to Apache Kafka, etc to enhance reliability of Tencent services.
- Deployed Tencent SaaS services on Tencent Public Cloud via Docker containers and Kubernetes automated CI/CD construction to improve service scalability.
- Wrote customized codes in the secondary development of Apache Superset to create a dashboard displaying user usage data of Tencent services by preprocessing and visualizing data with Pandas and Apache ECharts.
- Analyzed the data of Tencent advertisements using Apache Spark to promote automatic advertising and personalized recommendation.

RESEARCH PROJECTS

OSMX *Feb 2021 – Present*

- Leveraged the power of SparkSQL to design and implement user-defined functions for geometry calculation, enabling the provision of diverse and flexible APIs that empower developers to generate and manipulate geometries with ease.
- Utilized the Hadoop file API to efficiently parse records from the OpenStreetMap (OSM) PBF file, enabling extraction of OSM entities for subsequent processing and analysis.
- Extracted nodes, POIs, roads and all objects using SparkSQL and categorized different datasets from all objects based on OSM tags, including parks, lakes and buildings, etc.
- Generated the satellite image of corresponding OSM Vector data using Beast Raptor spatial-join for spatial machine learning and AI activities.

Beast *Aug 2019 – Nov 2021*

- Developed the function of outputting and compressing the .kml file of geospatial datasets in Java to strengthen the I/O module, a basic module of UCR-STAR.
- Optimized functions of well-known text and well-known binary conversion in Geolite computational geometry library for the benchmark of the performance between Esri, JTS and Geolite API.
- Improved functions relevant to wkb format to enhance the compatibility of parsing speed with Geolite.
- Increased the granularity of Raptor join from pixels to tiles to improve the performance of spatial join for large data.
