Yaming Zhang

Redwood City, CA zhangyaming0726@gmail.com yamingzhang.com 857-437-2701

EDUCATION

Northeastern University, *Boston, MA* *Dec 2023*
Master of Science in Computer Engineering
Concentration: Computer Systems and Software

University of California Riverside, *Riverside, CA* *Jun 2020*
Graduate Preparation Program in Computer Science

Xidian University, *Xi'an, China* *Jun 2019*
Bachelor of Science in Computer Science

SKILLS

Languages: Java, Go, Node.js, Scala
Frameworks: Spring, gRPC, React, Spark, Kafka, Flink
Databases: MySql, Redis, MongoDB, Elasticsearch, ScyllaDB
DevOps: Kubernetes, ELK Stack, Prometheus, Grafana

WORK EXPERIENCE

Electronic Arts (EA), *Redwood City, CA*
Full-Stack Software Engineer Intern *May 2023 – Aug 2023*

- Designed the **Java-based OOP** model for Player Lifecycle Graph, a serialization model to manage players' states and unified messages, resulting in a **30% cost reduction** by eliminating the need for customizing **Braze**.
- Developed a **Flink** topology for **Kafka** streaming PIN events execution, enabling efficient retrieval of lifecycles from **Redis**, reading player profiles from **ScyllaDB**, and executing the corresponding lifecycles.
- Leveraged EADP's **Data Query Language (DQL)** to extract data from unstructured **JSON** events, evaluate boolean conditions, and execute action scripts.
- Built a web application with **React** and implemented APIs with **Spring Boot**, empowering campaign managers to draw lifecycle flowcharts and retrieve players' current states in games.

Tencent, *Beijing, China*
Software Engineer *Jul 2020 – Aug 2022*

- Developed **Microservices** on **Go** using **gRPC** with logs on **ELK**, monitoring on **Prometheus**, asynchronous pipelines to **Kafka**, etc, achieving a **25% improvement** in interface response time and a **50% reduction** in production debug time.
- Established automated **CI/CD** pipelines that enhanced service security by seamlessly integrating **Unit Tests** during CI, while also enabling efficient rollback on **Tencent Cloud Kubernetes**.
- Wrote customized codes in the secondary development of **Superset** to create a dashboard displaying user usage data of Tencent services by preprocessing and visualizing data with **Pandas** and **ECharts**.
- Analyzed the traffic data of Tencent news using **Scala Spark** and **PySpark** to promote automatic advertising and personalized recommendation.

The Big-Data Lab at UCR, *Riverside, CA*
Research Assistant & Scala Developer *Aug 2019 – Jul 2020*

- Leveraged the power of **Scala** and **Spark** to design user-defined functions for geometry calculation, enabling the provision of diverse and flexible APIs that empower developers to generate and manipulate geometries with ease.
- Utilized the **Hadoop** file API to efficiently parse records from the **OpenStreetMap** PBF file, enabling extraction of OSM entities for subsequent **Big Data Processing Pipelines**.
- Extracted nodes, POIs, roads and all objects in pipelines and categorized different datasets from all objects based on OSM tags, including parks, lakes and buildings, etc.
- Generated the satellite image of corresponding OSM Vector data using **Beast Raptor** spatial-join for spatial machine learning and AI activities.

PROJECT

High Performance Computing *Sept 2022 – Dec 2022*

- Developed **C++** code employing **OpenMP**, **OpenMPI**, and **CUDA** for matrix multiplication, achieving superior performance via parallel computing strategies.
- Utilized diverse languages: **C++**, **Python**, **Go**, **Julia** for vector addition and matrix multiplication, benchmarking multithreading, **GPU** acceleration, and **BLAS/GEMM** functions.
- Evaluated and compared code performance on varying **AMD** and **Intel** CPUs, offering insights into execution speed disparities and resource utilization.
